

ERS-300-T

TAR-BASED REPAIR / WET SURFACE MASTIC

TAR-BASED MASTIC FOR PERMANENT AND EMERGENCY WET REPAIR

ASBESTOS FREE REPAIR MASTIC

Ecology's ERS-300-T Coal Tar Mastic is designed for repairing existing coal tar pitch roof systems, and for emergency repairs on wet surfaces. Formulated with highly refined coal tar distillates, proprietary non-asbestos fillers, and plasticizing oils, ERS-300-T has excellent low-temperature flexibility and performance characteristics. It is professional grade, roof repair mastic, which achieves a tenacious seal to the roofing substrate, by displacing water. ERS-300-T provides long-term security when making critical roof repairs, including use as an emergency wet surface repair material for both tar and asphalt based roof systems. ERS-300-T meets Federal Specification SS-C-153, Type II and ASTM D 4022 (containing no asbestos and meeting all physical requirements).

TROWELABLE FORMULATION FOR EASY APPLICATION

For permanent results, ERS-300-T should be applied to a clean, dry, horizontal surface. The homogenous consistency of ERS-300-T permits easy application with a standard margin trowel. Coverage rates will vary depending on the roughness of the substrate, the applied thickness and width of the material. ERS-300-T is typically used as a general purpose roof mastic on coal tar pitch based roof systems for repairing mat blisters, ridges, open seams, and holes. It may also be used for emergency, wet-surface repairs on conventional asphalt and tar-based roofing where a more permanent repair can be performed with appropriate materials when proper weather conditions exist. ERS-300-T should have one of Ecology's jute, or glass reinforcing membranes embedded into the still fresh mastic, with the reinforcement covered with a second troweled application of ERS-300-T.

GENERAL DATA

| | |
|-----------------|---|
| Color: | Black |
| Coverage: | Differs with porosity of surface and thickness of application |
| Container Size: | 5 gal |
| Weight: | 53 lbs |
| Pallet Size: | 36 pails |
