

NOTE:

1. This detail is to relieve moisture from insulation. It should not be used to correct existing problems in a roof retrofit application, but to help correct trapped moisture in an existing system where leaks may have developed. This detail is sometimes used for new roofs when vapor retarders are used and a venting system is desired. Vents should not be used on negative air pressure facilities. Ecology Technical Services must authorize use of these units.
2. Newer design solar vents are also available thru Ecology Roof Systems.
